Your Working Guide

A practical reference for the Coaches Center

WORKFORCE READY NOW

Beta coach onboarding

How to use this guide

A reference for running your coaching practice inside the SIGNAL Coaches Center. This walks through what you'll actually do, in the order you'll do it: bringing people in, managing your clients, and helping them collaborate with you on SIGNAL.

Keep this handy. You don't need to memorize it. We'll go through the core flow together live, and this is here for when you're on your own.

What's inside

Click any section below to jump straight to it.

Read this first: who sees what

This is the one thing worth understanding before anything else, because it's where it's easiest to make a mistake with a real client. SIGNAL has three separate places where you can write things down, and they have different visibility.

Where you write it	Who sees it	Use it for
The Notes tab (on a client)	You only. Your client never sees these.	Your private coaching notes: session recaps, reminders, action items for yourself.
Job-tracker annotations (a note on a specific job)	Shared with the client by default. You can choose to make it private.	Feedback you want the client to see on a specific application.
Engagement activity notes (notes inside a service engagement)	Private by default.	Notes on the steps of a package you've sold, shared only when you choose.

The trap: the Notes tab feels like “my client's notes,” but it is private to you. When you want to say something to the client about a job, you use the annotation on that job in their tracker, and you control whether it's shared. A teal eye means shared, a gold lock means private.

When in doubt: assume the Notes tab is private and the job annotation is visible. We'll point this out again where it matters.

The mental model

Three stages, left to right:

1. **Prospect.** Someone you're tracking but who has no SIGNAL account yet. Lives only in your pipeline. They don't know they're in SIGNAL.
2. **Client.** A prospect you've converted, then invited into SIGNAL with their own account.
3. **Collaboration.** Once they're in, you and your client work together: you send them jobs, leave feedback, and track their progress.

Most of your work moves people along this path and then supports them once they're collaborating.

1. Getting into the Coaches Center

Log in at wrnsignal-api.vercel.app/dashboard. You'll land on Coach Home.

The SIGNAL login screen. There's no password; you sign in with a magic link.

At the top of Coach Home you'll see a row of numbers: active prospects, active clients, total applications across your clients, how many are interviewing, offers, and an average interview rate. Below that are collapsible sections: Action Items, My Clients, and My Prospects.

Coach Home: your metrics, action items, clients, and prospects.

From this screen you can jump to almost everything: add a prospect, create or invite a client, open any client, or click a number to see the list behind it. There's a time-window toggle (7 days, 30 days, all time) that controls what the numbers reflect.

First-time setup tip: open My Settings, then Prospects, once early on. Your pipeline stages and document categories are created the first time you open those screens, so visiting them once gets your account set up.

2. Your prospect pipeline

A prospect is someone you're tracking before they have a SIGNAL account. Nothing you do here reaches them. No emails go out at this stage.

Add a prospect

From Coach Home or the Prospects page, click Add a prospect. The only required fields are a name and a source (referral, social media, website, personal contact, other). Everything else is optional under Add details.

The screenshot shows a modal window titled "ADD A PROSPECT". Inside, there is a "NAME" label followed by a text input field containing the placeholder text "e.g. Jordan Smith". Below this is a "SOURCE" label followed by five buttons: "REFERRAL", "SOCIAL MEDIA", "WEBSITE", "PERSONAL CONTACT", and "OTHER". Underneath the source buttons is a link that says "+ Add details". At the bottom of the modal are two buttons: "Cancel" and "Add Prospect" with a right-pointing arrow.

Add a prospect: only a name and a source are required.

ADD A PROSPECT

NAME
e.g. Jordan Smith

SOURCE
REFERRAL SOCIAL MEDIA WEBSITE
PERSONAL CONTACT OTHER

Hide details

INVITED EMAIL (optional)
prospect@example.com
Used later when you send a SIGNAL invite

PHONE NUMBER (optional)
(555) 555-5555

LINKEDIN (optional)
https://linkedin.com/in/...

TARGET ROLES (optional)
e.g. Product Manager, Strategy

EDUCATION STATUS (optional)
Select...

SOURCE DETAIL (optional)
e.g. Met at conference, intro from Sarah

INITIAL NOTE (optional)
Anything to remember about this prospect...

Cancel Add Prospect →

The optional fields under Add details: email, phone, LinkedIn, target roles, and a first note.

You can capture someone with just a name. Add the rest as you learn it.

Move a prospect through your stages

Open a prospect and advance them along your pipeline. Click a stage and the path fills in automatically. SIGNAL keeps the history of stages they've reached, so you can see how someone progressed. None of this is visible to the prospect.

A prospect record: their information, the pipeline, and the Convert to Client action.

Mark a prospect active, inactive, or lost

On the prospect, you can set a status of active, inactive, or lost. This is separate from their pipeline stage: a prospect can be marked lost and still sit in an early stage. It's just for your own tracking.

Convert a prospect to a client

When someone signs on, convert them. This moves them out of your prospect list and into your client roster, and it automatically drops a reminder into your action items: Send SIGNAL invite to that person.

The pipeline stages and the Convert to Client action.

Important: converting does not create their SIGNAL account or send them anything. It just changes how you're tracking them. The actual invite is a separate step (next section). That's intentional: you decide when they're ready to be brought into the platform.

3. Bringing a client into SIGNAL

This is the step where your client first hears from the platform. For your first clients, Peri will help you set these up so the first run goes smoothly.

There are two ways a person ends up with a SIGNAL account:

Invite a converted prospect

If you've already converted a prospect, you'll see an Invite to SIGNAL button on their record. Clicking it creates their account and sends a magic-link invite email. This is the action your auto-created reminder from the conversion step is nudging you toward.

What your client receives: an email with a link. When they click it, they're logged into their own SIGNAL account. There's no password to remember. If a link expires, you can re-invite and a fresh one goes out.

Create a client (full setup)

From Coach Home, Create a client captures their name, email, and some basic targeting info (the kind of role they're after, location, timeframe). When you submit, SIGNAL creates their account and sends them an onboarding email with a magic link to log in.

Create Client Account
Set up SIGNAL for your client -- an invite will be sent automatically

COACHING NOTES

Any roles, locations, or companies to avoid?

What does this client do well?

What are the gaps or challenges to address?

Create Client Account: SIGNAL creates the account and sends the invite automatically.

You don't set a password for them. They click the link in the email and they're in.

4. The client record

Open any client and you'll see their record organized into eight tabs:

- **Dashboard** their activity and metrics at a glance (section 6).
- **Job Tracker** the client's applications, including the jobs you've sent them.
- **Source a Job** send this client a job with a SIGNAL score and your note (section 6).
- **Notes** your private coaching notes (remember: the client never sees these).
- **Profile & Personas** their identity, targeting, and resume versions.
- **Engagements** services you've sold them (section 5).
- **Library** links to documents you've shared or kept for them (section 5).
- **History** a log of activity.

A client record with its eight tabs and the Source a Job, Add Note, and Schedule buttons.

You can also change a client's lifecycle status (Prospect, Active, Inactive, Archived) from the pill on their record or from your lists.

5. Your services: deliverables, packages, and engagements

Note for Monday: this whole area is built and live, but it's brand new and hasn't been used with a real client yet. We should run through it together (or do a quick test run) before you use it with a client, so nothing surprises you in front of them.

This is how you define what you sell and attach it to a client.

Build a deliverable

A deliverable is a reusable service you offer (for example, Resume Build or Mock Interview). Create it once in My Settings, then Services. You can give it a price and a rough time estimate, and break it into steps, where each step is owned by you, the client, or both.

Building a reusable deliverable with priced steps and an owner for each step.

You build these once and reuse them across clients.

Bundle deliverables into a package

A package groups several deliverables together (for example, a Foundations package). You can add an optional discount, and SIGNAL shows you a running price: the sum of the priced deliverables, minus your discount. Deliverables without a price are flagged so you notice.

Bundling deliverables into a package with the price computed for you.

Attach a package to a client (create an engagement)

When you attach a package to a client (or to a prospect you're setting up), SIGNAL takes a frozen snapshot of it at that moment. This matters: the engagement on that client is now its own independent copy. If you later edit or delete the package in your catalog, the client's engagement does not change. What they signed up for stays what they signed up for.

Attaching a package to a client. Each attached package becomes a frozen copy.

A new engagement starts as a draft proposal.

Move a proposal and track progress

A proposal moves through draft, sent, approved, and declined. This is purely about the service agreement and is separate from converting a prospect (approving a proposal does not change anyone's lifecycle status). Within an engagement, each step can be marked not started, in progress, or complete, with an optional due date.

An attached engagement: the proposal status control and per-activity progress.

Share documents with a client

The Library holds links (for example, a Google Drive document), not file uploads. Each link can be put in a category and has a Visible to client toggle, where off means coach-private. A link you add is yours alone until you turn that toggle on.

Adding a document link, with the Visible to client toggle (off means coach-private).

Your document categories are shared across all your clients and are created the first time you open the Documents settings.

6. Working with a client day to day

This is where the ongoing coaching happens.

The client dashboard

Opening a client's Dashboard shows you a Since your last visit strip (what's changed since you last looked), a metrics toggle (7, 30, or all days), tiles for total jobs, interviews, offers, and rejections, plus recent notes and a Needs your attention section.

A client dashboard: metrics, recent notes, and what needs your attention.

Simply opening the dashboard resets the since last visit marker, so the next time you open it, you see what's new since now.

Leave a note (and decide who sees it)

This is the privacy point from the top of the guide, in practice:

- A note in the Notes tab is for you. Session recaps, your own reminders. The client never sees these. You can mark some as action items with a priority.
- To say something to your client about a specific job, open that job in their tracker and add an annotation. These are shared with the client by default. The icon tells you the state: a teal eye means the client can see it, a gold lock means it's private to you.

The Add a note panel: choose a type, and for action items, a priority.

If you remember one thing: Notes tab is private. A job annotation is shared, unless you lock it.

Track action items across all your clients

The Required Actions view collects open action items across every client and prospect, sorted by priority. It also surfaces signals that SIGNAL detects on its own (a client who's gone quiet, an application awaiting your review, a new offer, and so on). You can dismiss a signal you don't want to see, and restore it later.

Required Actions: open items and detected signals across all your clients.

Source a job for a client (your recommendations)

This is one of your most powerful collaboration tools. In the product it's called Source a Job, and it appears as a tab on the client and as a button at the top of their record. You give SIGNAL a job, it scores that job against the client's profile, you review, and you send it to the client. The flow runs in four short steps: Job Details, Run Analysis, Review Results, Send to Client. You can paste a job posting URL to pull the details automatically, or enter them by hand.

The screenshot shows the SIGNAL Coaches Center interface. On the left is a sidebar with navigation options: Dashboard, My Clients, My Prospects, Required Actions, Feedback, My Settings, Prospects, Services, Documents, Billing, and Account. The main content area is titled 'Coaches Center — Beta' and shows a client profile for 'dimitri dimitrakis'. Below the profile, there's a 'Client Information' section with fields for 'CONTACT' (email: dimitrakisd@gmail.com) and 'TARGETS' (software engineering, front end developer, back end developer, full stack developer, tech consultant, cyber security specialist, machine learning technical, AI analyst). The 'STATUS' is 'Active' and the 'DATE' is 'May 11, 2020'. Below this is a 'Source a Job' button. The 'Source a Job' form is open, showing a 'Job Details' section with a 'Paste job posting URL' field and a 'Fetch Job' button. Below this is a 'Job Application' section with a 'Company' field and a 'Job Title' field. The 'Job Application' section also has a 'Job Description' field. The 'Job Application' section is currently empty.

Source a Job: the four-step flow to fetch, score, review, and send a job.

When you send it: the job appears in your client's Job Tracker as a new saved application, in a From you section. They see SIGNAL's verdict and score, plus your coaching note, flagged as a new recommendation they haven't looked at yet.

The screenshot shows the SIGNAL Coaches Center interface, specifically the 'Job Tracker' section for the client 'dimitri dimitrakis'. The 'Job Tracker' section is titled 'FROM YOU — COACH RECOMMENDATIONS (1)' and shows a list of recommendations. The first recommendation is for a 'Full-time' position at 'New York City' with a 'Score' of '85' and a 'Verdict' of 'Good opportunity worth pursuing this week'. The second recommendation is for a 'Full-time' position at 'New York City' with a 'Score' of '85' and a 'Verdict' of 'Good opportunity worth pursuing this week'. The third recommendation is for a 'Full-time' position at 'New York City' with a 'Score' of '85' and a 'Verdict' of 'Good opportunity worth pursuing this week'. Each recommendation includes a 'Date' and a 'Status'.

How your recommendations appear to you in the client's Job Tracker.

This is a real touchpoint your client experiences directly, so it's a good one to show them early (see the next section).

7. Helping your client collaborate with you on SIGNAL

You'll be teaching your clients how to work with you inside SIGNAL. Here's what they experience and what to walk them through. This covers the collaboration touchpoints between you and them. A fuller, client-facing walkthrough of SIGNAL's own tools is coming as a separate guide you can hand directly to clients.

Getting them logged in

When you create or invite them, they get an email with a magic link. Tell them to expect it (and to check spam), click the link, and they're in with their own account. No password. If they ever can't find the link, you can re-send the invite.

What to show them first

Three things make the collaboration click for a client:

4. **Their job tracker.** This is their home base: the jobs they're tracking and the status of each. When you send a job, it shows up here.
5. **Your recommendations.** When you send a job, it appears in their tracker with SIGNAL's score and your note, flagged as new. Show them where to find these so they know to look when you've sent one.
6. **Your shared feedback.** When you leave a shared annotation on one of their jobs, they can see it on that job. Let them know that's how you'll give them targeted feedback.

The collaboration loop, in plain terms for your client

You can describe it to a client like this:

"I'll send you jobs worth looking at, with a score and my notes, right into your tracker. You work your applications there and keep the statuses updated. When I have feedback on a specific job, I'll leave it on that job so you'll see it. Keep your tracker current so I can see where you are and help."

Get help and give feedback

Questions about anything in here, or anything in SIGNAL? Email us at support@stopapplyingblind.com. We're glad to help.

Send feedback from inside SIGNAL

You're one of our first coaches, and your feedback shapes what SIGNAL becomes. There's a Feedback option built right into the Coaches Center so you can tell us something the moment you notice it, without leaving what you're doing.

To send feedback: click Feedback in the left menu (or the Send feedback panel where it appears). Choose a type, write what happened or what you'd like, and send.

The types help us route it quickly:

- **Issue / Bug** something is broken or not working the way you expected.
- **Enhancement** an idea or a change that would make SIGNAL work better for you.
- **Technical Question** you're not sure how something works or how to do it.
- **General Feedback** a reaction, a note, anything that doesn't fit the others.
- **Other** when none of the above fits.

Leave the OK to reply via email box checked if it's fine for us to follow up with you directly. That's the fastest way for us to ask a quick clarifying question or let you know when something's fixed.

The more specific, the more useful: what you were doing, what you expected, and what happened instead. A few words in the moment beats a perfect report later. Nothing is too small.

Quick reference

The three note systems

System	Who sees it	Default
Notes tab (coaching notes)	You only	Private, always
Job-tracker annotation	You and the client	Shared (you can lock it)
Engagement activity note	You, client if shared	Private

Common actions, where to start

I want to...	Where to start
Track someone new (no account yet)	Add a prospect
Sign someone on	Convert prospect, then Invite to SIGNAL
Set up a new client from scratch	Create a client
Define what I sell	My Settings, then Services
Sell a package to a client	Client, then Engagements, then Attach a package
Send a job to a client	Source a Job (on the client)
Give feedback the client sees	Job-tracker annotation (shared)
Keep a private coaching note	Notes tab
See everything needing my attention	Required Actions
Report a bug or share an idea	Feedback (in the left menu)
Ask a question by email	support@stopapplyingblind.com

This guide covers what's live in the Coaches Center today. As SIGNAL grows, sections will be updated. If something on screen doesn't match what's here, trust the screen and let us know. Questions any time: support@stopapplyingblind.com.
